

Prognosys License for the 5500sc Ammonia Monochloramine Analyzer

# de producto:	25277000
USD Precio:	Contacto Hach
Disponible	

Eliminate last minute maintenance emergencies

Prognosys is a predictive diagnostic system that allows you to be proactive in your maintenance, by alerting you to upcoming instrument issues. Know with confidence whether changes in your measurements are due to changes in your instrument or your water.

The 5500 sc Ammonia Monochloramine Analyzer is shipped with a 6-month free trial of Prognosys preinstalled. After this 6-month period, the instrument will require a one-time activation license key to continue operating Prognosys. The license can be purchased with the analyzer at the time of order or at a later date.

The Prognosys system runs on the 5500 sc AMC Analyzer, displaying two status indicators for every connected Prognosys ready instrument. These indicators give you all the information you need to plan your preventive maintenance and avoid unexpected emergencies. The measurement indicator monitors the instrument's components and uses that information to alert the user to upcoming instrument needs before measurements become questionable. The service indicator tracks the number of days until the instrument will require maintenance.

Confidence in your measurements

Prognosys gives you confidence by monitoring your instrument and alerting you before measurements become questionable.

Visibility of upcoming maintenance

Prognosys provides visibility to upcoming maintenance needs, facilitating proactive planning and avoiding unexpected instrument downtime.

Immediate awareness of instrument condition

Prognosys displays the information needed to determine if a measurement change is due to your instrument or your water.
