

Claros

The Water Intelligence System from Hach

Imagine the time savings, cost reductions, and peace of mind that a complete “water intelligence system” could provide – a system that would harness information to deliver guided insights for optimised plant operations, and address uncertainties about compliance, efficiency, instrument maintenance, and errors in sampling or logging.

Claros, the Water Intelligence System from Hach® brings together decades of instrument expertise and software development to help you access data from anywhere, and improve decisions in three critical areas: Instrument Management, Data Management, and Process Management.

Claros Instrument Management

Modules

- Prognosis Predictive Diagnostics
- Mobile Sensor Management

Probes and analysers at wastewater plants are heavily exposed to contamination and need frequent maintenance and calibration. Guided maintenance can ensure better instrument management, helping reduce unplanned downtime so that operators can trust measurement data and make better decisions.

Claros brings together Prognosis Predictive Diagnostics for proactive maintenance, and Mobile Sensor Management for immediate awareness of instrument condition.

Be Right™

Claros Instrument Management

Prognosys

Can you trust your measurement?

Prognosys allows you to be proactive in your instrument maintenance, so you can trust your measurements. This system alerts you to upcoming maintenance tasks by monitoring the instrument's internal components and tracking service requirements. We've leveraged our expertise to give you absolute confidence in your on-line instrumentation and the quality of your measurement results. By giving you immediate awareness of instrument condition, you'll know with confidence whether changes in your results are due to changes in your instrument or your water.

Plan your preventive maintenance and avoid unexpected emergencies, and be confident that you can trust your measurement.

Mobile Sensor Management

Are your lab and process instruments in alignment?

Simplify calibration by sending values from your laboratory instruments to your process instruments. Mobile Sensor Management lets you verify and adjust process instrument measurements using laboratory reference values with the touch of a finger.

How is your system running?

Receive status alerts for all connected instruments within a single view so you can see your system's complete performance. Web-enabled device connectivity allows access to data from anywhere. The system is scalable so all future instruments can be seamlessly integrated into the platform.

Hach Service Partnerships

At Hach we understand your facilities' problems are unique and we have developed Hach Service Partnerships that can help give you peace of mind about maintaining and supporting your Hach product. Whether it is a lack of resources, compliance concerns, or the need for predictable budgeting, we have programs to fit your unique needs.
